

STRUCTURE

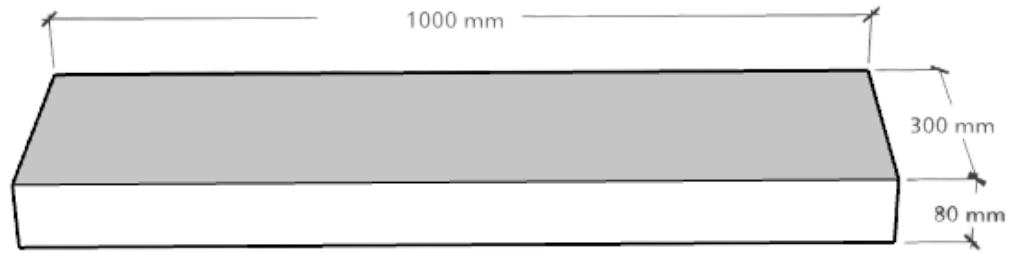

- Select from standard treads that fix to the stair substrate, either flat fixing or into a recess on the base of each tread
- Select to include threaded rods for fixing of treads or handrail
- Select our slide on insert option to slide the tread onto a steel lintel

INSTALLATION OF THE TREADS:

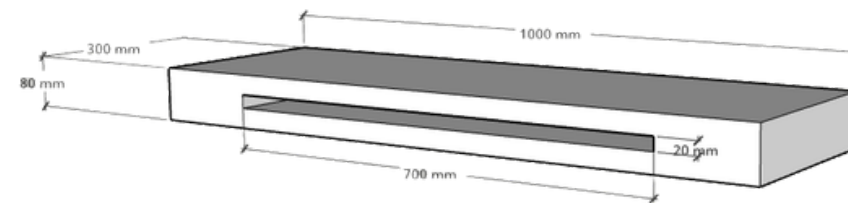

- TREADS to be installed by a qualified tradesperson

NOTES:

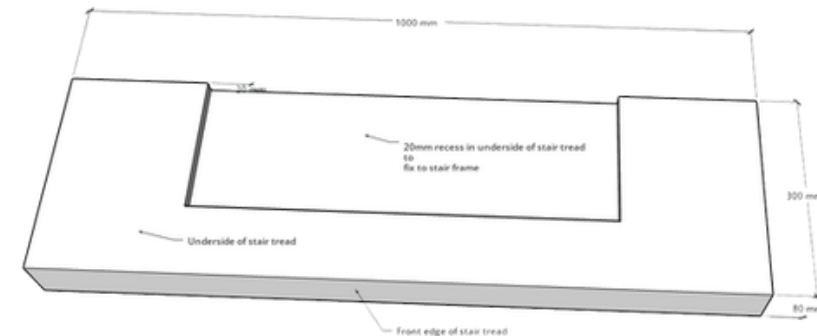

- 12 month structural warranty on the concrete
- Concrete is stain resistant - harsh chemicals when left on the concrete surface may affect the sealer coating
- Due to expansion and contraction of the concrete as a result of heat, micro cracks may appear which are generally not structural in nature and are normal in concrete
- All dimensions provided are approximate due to the nature of this product. Slight variations may occur in sizes, colour and finish due to the hand-made nature of the product

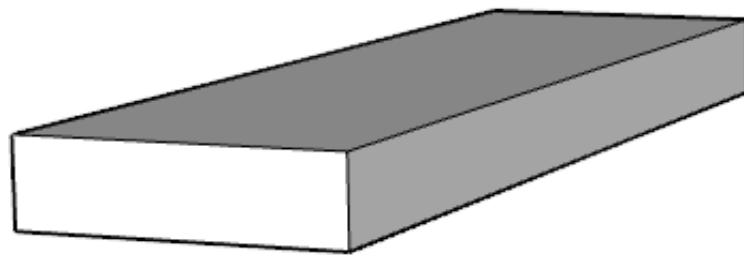

STANDARD Tread (no recesses or hole penetrations)

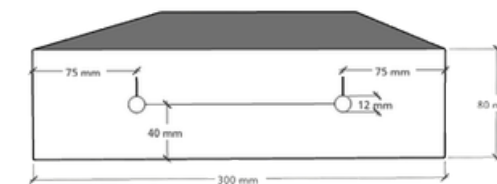

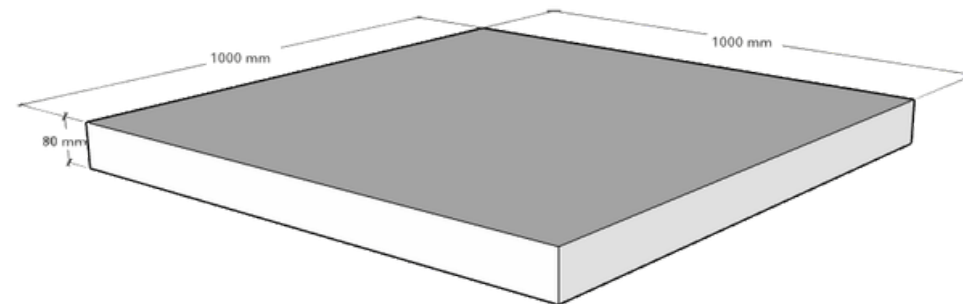

SLEEVE Tread (Hollow in the middle of the tread allows it to slide onto the stair substrate)
NOTE that due to the technical difficulty of making these they would be a custom request

RECESS Tread (20mm recess on the base of the tread allows fixing onto the stair substrate)

LANDING

THREADED ROD Tread (Threaded rods can be included for fixing of handrails or to a substrate)
